IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re Application of:

Phillip D. Bondurant et al

Application No.: 09 / 713,415

Filed: 11/15/2000

For: Method and Apparatus for In Situ  
Inspection of Reformer Tube

Group Art Unit: 2877

Examiner: PHAM, HOA Q.

Hon. Commissioner for Patents  
Alexandria, VA. 22313

Sir:

AMENDMENT

CANCEL CLAIMS

CERTIFICATE OF MAILING BY "EXPRESS MAIL"

Atty Docket No. QTT1100

**Box Patent Application**  
Hon. Commissioner for Patents  
Alexandria, VA

Sir:

In the Application of: **Phillip D. Bondurant et al.**

Date Filed: **June 07, 2004**

Title: **Method and Apparatus for In Situ  
Inspection of Reformer Tube**

I hereby certify that the attached Amendment and Postcard are being deposited with the United States Postal Service "EXPRESS MAIL Post Office to Addressee" service under 37 C.F.R. § 1.10, Mailing Label Certificate No. **ET 438020685 US** on **June 07, 2004**, addressed to: Mail Stop Amendments, Commissioner for Patents, P.O. Box 1450 Alexandria, VA 22313-1450.

Respectfully submitted,  
**Hayward A. Verdun**

32. (NEW) A device for inspecting the interior of a reformer tube used in chemical processing for the presence of abnormalities comprising:

a housing, wherein the housing further includes:

a light source;

means for focusing the light source on an interior surface of said reformer tube;

means for detecting reflected light from the light source focused on the interior of said reformer tube; and

means for moving the housing through said reformer tube.

33. (NEW) The device for inspecting the interior of a reformer tube used in chemical processing for the presence of abnormalities according to Claim 32, wherein said focusing means includes a device for projecting a focused ring of light on an interior surface of said reformer tube.

34. (NEW) The device for inspecting the interior of a reformer tube used in chemical processing for the presence of abnormalities according to Claim 32, wherein the focusing means further includes a substantially conical mirror for projecting the light beam onto the interior surface of the reformer tube.

35. (NEW) The device for inspecting the interior of a reformer tube used in chemical processing for the presence of abnormalities according to Claim 34, wherein the conical mirror has a parabolic shape for projecting and focusing the light beam onto the interior surface of the reformer tube.

36. (NEW) The device for inspecting the interior of metal tubes used in chemical processing for the presence of abnormalities according to Claim 35, wherein the detecting means is capable of measuring a position of the reflected light from the interior of the reformer tube surface relative to a field of view of the detecting means.

37. (NEW) The device for inspecting the interior of a reformer tube used in chemical processing for the presence of abnormalities according to Claim 36, wherein a field of view of the detecting means is positioned such that the field of view of the detecting means minimizes the amount of reflected light collected from the reformer tube surface that was scattered from the housing.

38. (NEW) The device for inspecting the interior of metal tubes used in chemical processing for the presence of abnormalities according to Claim 37, wherein the detecting means is one of a position sensitive photo detector (PSD), a lateral effect photo diode detector, a photo diode array detector, a CMOS array detector, a charge-coupled device (CCD) detector and a pixelized array detector.

39. (NEW) The device for inspecting the interior of metal tubes used in chemical processing for the presence of abnormalities according to Claim 38, wherein the detecting means is one of a 1-dimensional and 2-dimensional detector.

40. (NEW) The device for inspecting the interior of metal tubes used in chemical processing for the presence of abnormalities according to Claim 39, wherein said abnormalities are at least one of manufacturing defect, metal dusting and creep.

41. (NEW) The device for inspecting the interior of a reformer tube used in chemical processing for the presence of abnormalities according to Claim 40, wherein the housing is adapted for use in a reformer tube by preventing chemical interaction with the inside surface of said tube.

42. (NEW) The device for inspecting the interior of a reformer tube used in chemical processing for the presence of abnormalities according to Claim 41, wherein the housing is constructed so that surfaces which may potentially contact the interior of said tube are constructed out of nonmetallic materials.

43. (NEW) The device for inspecting the interior of a reformer tube used in chemical processing for the presence of abnormalities according to Claim 32, wherein said means for focusing the light source on the surface of said tube further includes,

a rotating portion of the housing, wherein the rotating portion of housing includes the light source and the means for detecting the light focused on the interior surface of said reformer tube.

Q, 44. (NEW) The device for inspecting the interior of a reformer tube used in chemical processing for the presence of abnormalities according to Claim 43, wherein a field of view of the detecting means is positioned such that the field of view of the detecting means minimizes the amount of reflected light collected from the reformer tube surface that was scattered from the housing.

45. (NEW) The device for inspecting the interior of metal tubes used in chemical processing for the presence of abnormalities according to Claim 44, wherein the detecting means is capable of measuring a position of the reflected light from the interior of the reformer tube surface relative to a field of view of the detecting means.

46. (NEW) The device for inspecting the interior of metal tubes used in chemical processing for the presence of abnormalities according to Claim 45, wherein the detecting means is one of a position sensitive photo detector (PSD), a lateral effect photo diode detector, a photo diode array detector, a CMOS array detector, a charge-coupled device (CCD) detector and a pixelized array detector.

47. (NEW) The device for inspecting the interior of metal tubes used in chemical processing for the presence of abnormalities according to Claim 46, wherein the detecting means is one of a 1-dimensional and 2-dimensional detector.

48. (NEW) The device for inspecting the interior of metal tubes used in chemical processing for the presence of abnormalities according to Claim 47, wherein said abnormalities are at least one of manufacturing defect, metal dusting and creep.

Q, 49. (NEW) The device for inspecting the interior of metal tubes used in chemical processing for the presence of abnormalities according to Claim 47, wherein said high speed operation is achieved by using a material that is substantially lighter than metal for the body of said device.

50. (NEW) The device for inspecting the interior of a reformer tube used in chemical processing for the presence of abnormalities according to Claim 49, wherein the housing is adapted for use in a reformer tube by preventing chemical interaction with the inside surface of said tube.

51. (NEW) The device for inspecting the interior of a reformer tube used in chemical processing for the presence of abnormalities according to Claim 50, wherein the housing is constructed so that surfaces which may potentially contact the interior of said tube are constructed out of nonmetallic materials.

52. (NEW) The device for inspecting the interior of a reformer tube used in chemical processing for the presence of abnormalities according to Claim 32, wherein said means for focusing the light source on the surface of said tube further includes,

a rotating portion of the housing, wherein the rotating portion of housing includes the light source.

53. (NEW) The device for inspecting the interior of metal tubes used in chemical processing for the presence of abnormalities according to Claim 32, wherein the detecting means is capable of measuring a position of the reflected light from the interior of the reformer tube surface relative to a field of view of the detecting means.

54. (NEW) The device for inspecting the interior of a reformer tube used in chemical processing for the presence of abnormalities according to Claim 53, wherein the detecting means is capable of measuring a position of the reflected light from the interior of the reformer tube surface relative to a field of view of the detecting means.

Q, 55. (NEW) The device for inspecting the interior of metal tubes used in chemical processing for the presence of abnormalities according to Claim 54, wherein the detecting means is one of a position sensitive photo detector (PSD), a lateral effect photo diode detector, a photo diode array detector a CMOS array detector, a charge-coupled device (CCD) detector and a pixelized array detector.

56. (NEW) The device for inspecting the interior of metal tubes used in chemical processing for the presence of abnormalities according to Claim 55, wherein the detecting means is one of a 1-dimensional and 2-dimensional detector.

57. (NEW) The device for inspecting the interior of metal tubes used in chemical processing for the presence of abnormalities according to Claim 56, wherein said abnormalities are at least one of manufacturing defect, metal dusting and creep.

58. (NEW) The device for inspecting the interior of a reformer tube used in chemical processing for the presence of abnormalities according to Claim 57, wherein the housing is adapted for use in a reformer tube by preventing chemical interaction with the inside surface of said tube.

59. (NEW) The device for inspecting the interior of a reformer tube used in chemical processing for the presence of abnormalities according to Claim 58, wherein the housing is constructed so that surfaces which may potentially contact the interior of said tube are constructed out of nonmetallic materials.

60. (NEW) The device for inspecting the interior of metal tubes used in chemical processing for the presence of abnormalities according to Claim 58, wherein said high speed operation is achieved by using a material that is substantially lighter than metal for the body of said device.

---

**REMARKS**

Applicants submit that no additional fees are required at this time.

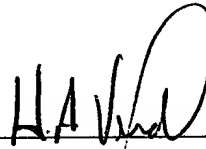

**Conclusions**

In view of the foregoing, Applicants respectfully request reconsideration and reexamination of this application and the timely allowance of the pending claims.

Respectfully submitted,

**Hayward A. Verdun, LLP**
